MayaCardio

OCTOBER 2026

Software Systems Engineer

Device software · Cloud services · Clinical applications

Delhi NCR · Work from office

VIT 2026/2027 graduates and final-year students

Connect devices, data and AI. Build software clinicians can trust.

MayaCardio is developing non-invasive cardiac-monitoring technology. This is a **software-first role**: build the code that connects devices, data services, AI outputs and clinician-facing applications. Your focus is **software, data flow and reliability**.

WHAT YOU WILL WORK ON

Build useful software. Own a defined feature or module—from clarifying requirements to coding, testing and reviewed integration.

Connect the system. Work on device interfaces, APIs, databases or applications so data arrives with the right identity, timing and status.

Make failures visible. Investigate disconnects, delayed or duplicate data and stale displays. Test error handling and recovery—not just the happy path.

Bring AI into the workflow. Work with data scientists to connect model outputs to clear displays and clinician feedback. Protect data and document tests and limitations.

WHAT YOU BRING

A bachelor's or master's degree, completed or in progress, in **Computer Science, Software Engineering, IT, Electronics and Communication**, Electrical Engineering, Biomedical Engineering, Instrumentation, Data Science or a related field.

Bring **strong coding fundamentals in one language**: Python, JavaScript/TypeScript, C/C++ or Java. Be ready to debug code, use basic data structures, write simple tests and explain your contribution to one project.

Coursework and team projects count. APIs, databases, Linux, user interfaces or device-software experience are useful—not mandatory. Prior employment and medical-device experience are not required.

HOW YOU APPROACH PROBLEMS

Listen, clarify and follow through. Confirm the objective, constraints and expected output. Follow agreed instructions, flag conflicts early, and incorporate feedback and updated requirements.

Solve problems systematically. Reproduce the issue, separate observations from possible causes, choose useful tests, and revise your approach when the evidence changes.

Think from first principles. Reason about data, timing, memory and networks. State assumptions, predict what should happen, and check your explanation against the results.

YOUR GROWTH—AND OUR COMMITMENT

Start with one anchor skill: depth first, then breadth. Own a defined work package and grow across device software, backend/cloud or applications. You do not need to know every layer before joining.

Our skill-focused Captains, a named **Development and Growth Coach** and a technical reviewer support you through **weekly feedback and monthly progress reviews**.

We hire for **learning velocity and judgment**. "I don't know yet" is welcome; investigate, learn and follow through.

GRADUATE PATHWAY AND COMPENSATION

FOUR-MONTH INTERNSHIP	FULL-TIME ON CONVERSION	PERFORMANCE-LINKED VARIABLE
₹35,000 per month	**₹7.5 lakh** per year	**+ ₹1 lakh** Payable on completing 12 months of full-time employment*

* The 12 months start when you join full-time after the internship. Payment is subject to agreed performance criteria.

Conversion depends on agreed criteria, a funded role and a written offer. Completion and variable-payment terms will be shared in writing before joining.

APPLY AND SHOW US HOW YOU THINK

BuildWithUS@mayacardio.io

Email your **CV or short project summary and completed case assessment for this role**. Request the case brief at the same address, naming the role. No cover letter or polished portfolio is needed.

Subject: "2026 Oct: Software Systems Engineer — [Your Name]"

Shortlisted applicants: **60-minute virtual interview**. We assess instruction-following, problem-solving, reasoning from fundamentals and adaptation to feedback.

AI tools are welcome with disclosure. Be ready to explain your choices, verify your results and adapt your work.
